## SUMMARY

Recent B.Sc. Computer Science graduate with a CGPA of 9.4/10 and hands-on experience through Data Analyst and Data Engineer internships. Worked with SQL, Python, Pandas, Snowflake, AWS S3, Power BI and Tableau on data projects involving data cleaning, data processing, data modelling and dashboard development. Interested in understanding how data moves from raw files to useful information and building simple, practical solutions with data.

## TECHNICAL SKILLS

**Programming**

• SQL • Python • NumPy • Pandas

**Data Engineering**

•Data Warehousing • Data Modeling • Data Lineage • Data Quality Testing • Schema (Star, Snowflake) • Microsoft Fabric • PySpark • ETL/ELT • Data Pipelines • Incremental Loading • Data Warehousing • Data Modelling • Data Quality • Snowflake • DBT Cloud

**Databases**

• Snowflake • PostgreSQL • MySQL

**Cloud**

• AWS • Microsoft Fabric

**BI & Analytics**

• Microsoft Power BI • DAX • Advanced Excel • Power Query • Tableau

**Version Control & Automation**

• Git • GitHub • GitHub Actions

## INTERNSHIPS

**Data Engineer Intern | MS GLEE Education** **6 Months | [Jan 2026 – July 2026]**

Tools & Technologies: AWS S3, Snowflake, SQL, Power BI

- Worked with SQL to query, clean and prepare data for project requirements.
- Used Snowflake to store and work with data as part of the project.
- Used AWS S3 to work with data files and cloud storage.
- Built Power BI reports and dashboards using the prepared data.
- Worked on a data project using SQL, Snowflake, AWS S3 and Power BI.

**Data Analyst Intern | ElevanceSkills** **Virtual | [Aug 2026 – Sep 2026]**

Tools & Technologies: Python, Pandas, Tableau, HTML

- Cleaned and prepared job posting data using Python and Pandas for analysis.
- Imported the prepared dataset into Tableau and created dashboards based on the assigned tasks.
- Created different charts and visualizations in Tableau to present the data clearly.
- Used HTML to build and structure the Job Analytics Portal for presenting the dashboards.

## PROJECTS

**CitiBike Rebalancing Command Centre | End-to-End Microsoft Fabric Analytics Project |** **2026**

Technologies: Microsoft Fabric, PySpark, SQL, PostgreSQL (Neon), Power BI, GitHub Actions, Git

- Built an end-to-end bike-share analytics solution using Microsoft Fabric to analyse station availability, identify rebalancing needs, and study the relationship between weather and ride demand.
- Developed a multi-layer data architecture using Bronze and Silver Lake houses and a Gold Warehouse, integrating PostgreSQL data, GBFS station feeds, weather data, and operational records.
- Implemented incremental data ingestion and transformation workflows, including deduplication, Delta Lake optimization, and Slowly Changing Dimension Type 2 (SCD2) for station history.
- Designed a Gold-layer star schema and a Direct Lake semantic model to support analytical reporting and Power BI dashboards.
- Automated data ingestion and operational data synchronization using Fabric pipelines and scheduled GitHub Actions workflows; implemented audit checks to monitor data consistency across layers.
- Created a five-page Power BI report to analyse station availability, rebalancing operations, maintenance tickets, rider feedback, and weather-related demand patterns.

**CloudMart Analytics --- End-to-End E-Commerce Data Engineering Pipeline** **2026**

Technologies: AWS S3, AWS IAM, Snowflake, DBT Cloud, Power BI, SQL

- Developed an end-to-end ELT pipeline to move 100K+ orders records from AWS S3 to Snowflake by using the external stages feature and COPY INTO commands.
- Created staging, intermediate, and mart models in dbt using SQL to transform and organize data into analytics-ready tables for reporting.
- Added dbt schema tests like unique, not_null, and accepted_values to identify data quality issues and ensure consistent, reliable data.

- Built interactive Power BI dashboards to visualize sales overview, customer analysis, product performance, and orders trends based on SQL queries and DAX formulas.
- Checked the transformed data against the source tables in Snowflake to maintain accuracy and documented data lineage in dbt Cloud to support easier troubleshooting and maintenance.
  https://github.com/nssayyad01/cloudmart_analytics

**E-Commerce Mini Analytics Pipeline --- DBT + Snowflake** **2026**

Technologies: DBT Cloud, Snowflake, SQL

- Built a dbt project connected to Snowflake to transform raw e-commerce data into analytics-ready tables.
- Designed staging and mart models in dbt using SQL, used functions like source() and ref() to manage data lineage and transformations.
- Added dbt schema tests, including unique and not_null checks, to check data accuracy and consistency.
- Set up materializations using views for staging models and tables for mart models, based on performance and project requirements.
- Fixed issues with dbt, YAML and Snowflake settings while developing and testing the pipeline.

**Superstore Sales Analytics | Power BI** **2025**

Technologies: Power BI, Power Query, DAX, SQL, Excel

- Designed an interactive Power BI dashboard to analyze 10K+ orders across multiple regions, categories, and customer segments.
- Created KPI cards for Total Sales, Total Profit, Orders and Profit Margin using DAX measures.
- Built a star schema data model and transformed raw data using Power Query.
- Implemented slicers, drill-through filters and interactive visuals for dynamic business analysis.
- Identified key business insights such as top-performing regions, profitable customer segments and seasonal sales trends.

## EDUCATION

**Bachelor of Science (B.Sc.) - Computer Science** **2023 - 2026**

Dr. Babasaheb Ambedkar Marathwada University (BAMU), Aurangabad, Maharashtra

CGPA: 9.4 / 10.0

Coursework: Data Analytics, Python Programming, Database Management Systems, Cloud Computing

## CERTIFICATIONS

**Snowflake Badge 1 -- Data Warehousing Workshop**

Issued by: Snowflake Inc. | Credential: Snowflake Data Warehousing Workshop Badge

## ACHIEVEMENTS & LEADERSHIP

- Smart India Hackathon (SIH) 2025-26 Participant - Designed a software-based clinic management system to ensure basic healthcare services for patients of rural villages having no hospitals. (Team size – 6)
- Department Topper - Obtained 9.4 CGPA in B.Sc. Computer Science from BAMU Aurangabad; consistently topping the department throughout.
- Sports Winner - College-level sports competition winner, demonstrating competitive drive and teamwork.
- NSS Volunteer (3 Years) - Actively participated in community service activities including cleanliness drives, health campaigns, and social awareness activities.
- College Event Volunteer - Supported organization and execution of college events including convocation ceremonies.

## LANGUAGES

• English (Fluent) • Hindi (Native) • Marathi (Fluent)

## INTERESTS

• Singing • Reading • Data Engineering • Cloud Technologies.
